VICTORII CALCULUS

EX CODICE VATICANO

PRAEFATIO EDITORIS

Victorii calculum et calculi praefationem edidi in Schloemilchi annalium Tomi XVI, pag. 42–79 ex codicibus Basileae, Bernae, Bambergae asservatis. Quorum exemplar quum ad principem Boncompagni misissem, vir matheseos historiae adiutor egregius Victorii praefationem, qualis in codice Vaticano Reg. Svecor. 1569, his in codice Vaticano Reg. Svecor. 1281, denique in codice Vindobonensi 2269 legitur, descriptam ad me misit vel mittendam curavit.

Primus ex his codicibus cum praestantissimus esse mihi videretur, etsi XII demum saeculo attribuitur, rogavi principem, ut calculi ipsius collationem ex illo codice mecum communicaret. Princeps benignus calculum ipsum descriptum mihi tradidit. Recensui igitur calculum iterumque edo in his annalibus, non ingratum facturum esse me ratus, si computandi antiquissimum quod sci-
mus adminiculum hoc quoque loco palam facerem. Plures quidem Victorii calculo et in aliis codicibus et in Vaticano 1569 sunt additae tabulae, quas vel noni vel decimi saeculi calculatores finxerunt. Victorio eas alienas esse pluribus demonstravi in Schloemilchi annalibus.

Genuinae Victoriani opusculi formae propius iam accessisse his de causis mihi videor: 1° quae rubra antea sub contextum reieci, nunc suis locis reddidi, 2° praefationis contextum ex codice Vaticano potui emendare, 3° duarum, trium, quattuor, quinque unciarum formis, quarum partes inferiores antea rotundatas depinxi, angulares tractus restitui. Quod enim melius hi tractus illas formas a ceteris formis distinguunt, verisimilius esse puto a Victorio ipso eos esse adhibitos.

Quod attinet ad calculi numeros, codex V, ubique consentit cum B, exceptis minoribus erratis; in ordinis 95 lineis 13–44 primo numero omisso sequentes singulis lineis promoti sunt, linea 45 iisdem numeris in utroque codice est inscripta; B₂ differt duobus tantum locis, nempe in ordinis 35 linea 43 B₂ habet

$\phi \psi$ i. e. $\frac{(1\frac{1}{2})}{12} \frac{(1\frac{1}{2})}{12}$ et in ordinis 47 linea 45 $\phi \psi$ i. e. $\frac{2}{12} \frac{(1\frac{1}{2})}{12}$.

Mirum est quod tres codices B_1 , B_2 , V_1 in ordinis 41 linea 45 praebent $\nearrow \rho$
 ω i. e. $\frac{1}{12} \frac{(\frac{1}{2})}{12} \frac{(\frac{1}{3})}{12}$ pro $\&$ ω i. e. $\frac{(\frac{1}{2})}{12} \frac{(\frac{1}{3})}{12}$, in ordinis 45 linea 42 $\text{f} \nearrow$ i. e. $\frac{7}{12}$
 $\frac{1}{12}$ pro ff i. e. $\frac{8}{12}$, in ordinis 63 linea 42 $\text{ff} \nearrow$ i. e. $\frac{10}{12} \frac{1}{12}$ pro ff i. e. $\frac{11}{12}$.

Errata leguntur in B_1 circiter .ccl., in B_2 .ccxlv., in V_1 .cclv., qui numeri non admodum inter se differunt. Verisimile igitur est tria illa Victoriani calculi exemplaria, quae adhuc cognita sunt, ex uno eodemque codice esse orta, cuius accuratissima depictio, quantum ex praefatione est coniciendum, codex Vaticanus 1569 sit habendus. Hunc igitur imprimis secutus sum.

Signa quibus usus sum sunt haec :

INCIPIT PRAEFATIO DE RATIONE CALCULI

Unitas illa , unde omnis numerorum multitudo procedit , quae proprie ad arithmeticam disciplinam pertinet, quia vere simplex est et nulla partium congregatione subsistit , nullam utique recipit sectionem. De ceteris vero rebus
 5 licet aliquid tale sit , ut propter integritatem ac soliditatem suam unitatis meruerit vocabulo nuncupari, tamen quia compositum est, divisioni necessario subiacebit. Nihil enim in tota rerum natura praeter memoratam numerorum unitatem tam unum inveniri potest, quod nulla omnino valeat divisione distribui. Quod ideo fit , quia non simplicitate sed compositione subsistit. Di-
 10 citur enim unus homo, unus equus , unus dies , una hora , unus nummus et alia huius modi innumerabilia, quae licet unitatis sint sortita vocabulum, tamen pro causae atque rationis necessitate dividuntur. Ad huius divisionis compendium tale calculandi argumentum antiqui commenti sunt , ut omnis dividendi integritas rationabili per illud possit partitione secari, sive id corpus sive
 15 res incorporea sit, quod dividendum proponitur. In hoc argumento unitas assis vocatur , cuius partes iuxta proportionalitatem suam propriis sunt insignitae vocabulis, notis etiam ad hoc excogitatis, per quas eadem vocabula exprimantur, ut per discretionem nominum et notas nominibus affixas uniuscuiusque particulae notio facilius advertatur. Et assis quidem, qui per .I. litteram, sicut in numeris
 20 unum scribi solet, exprimitur , .XII. partes habet. Quarum si unam ei detraxeris, reliquae .XI. partes lab.^{us} dicuntur. Illa vero, quam detraxisti , id est duodecima, uncia vocatur. Si duas sustuleris, decem residuae dextans et quod
